Peer Review, Peer Education, and Modeling in the Practice of Clinical Ethics Consultation: The Zadeh Project Stuart G. Finder 2018-09-11 This open access book about the Zadeh Project demonstrates and explores a core question in clinical ethics: how can ethics consultants be accountable in the face of a robust plurality of ethical standpoints, especially those that underwrite practices and methods for doing ethics consultation as well as those viewpoints and values encountered in daily clinical ethics practice?

Underscoring this question is the recognition that the field of clinical ethics consultation has arrived at a crucial point in its maturation. Many efforts are underway to more formally "professionalize" the field, with most aimed toward stabilizing a specific set of institutional considerations. Stretched between these institutional and practical initiatives resides a crucial set of ethical considerations, chief among them the meaning and scope of responsibility for clinical ethics consultants. Developed around a long-form case scenario, the Zadeh Project provides a multi-layered series of "peer-reviews": critique of the actions of the case scenario's ethics consultant; reflection on clinical ethics method; examination of the many ways that commitments to method and practice can, and do, intersect, overlap, and alter one another. The design and format of this book thus models a key element for clinical ethics practice: the need and ability to provide careful and thoughtful explanation of core moral considerations that emerge among diverse standpoints. Specifically designed for those studying to become and those who are ethics consultants, this book, with its innovative and multi-layered approach, allows readers to share a peer-review-like experience that shows accountability to be what it is, an ethical, not merely procedural or administrative, undertaking.

Palliative Care and Ethics Timothy E. Quill 2014 Hospice is the premiere end of life program in the United States, but its requirement that patients forgo disease-directed therapies and that they have a prognosis of 6 months or less means that it serves less than half of dying patients and often for very short periods of time. Palliative care offers careful attention to pain and symptom management, added support for patients and families, and assistance with difficult medical decision making alongside any and all desired

medical treatments, but it does not include a comprehensive system of care as is provided by hospice. The practice of palliative care and hospice is filled with sometimes overt (requests for hastened death in an environment where such acts are legally prohibited) and other times covert (the delay in palliative care referral because the health care team believes it will undermine disease directed treatment) ethical issues. The contributors to this volume use a series of case presentations within each chapter to illustrate some of the palliative care and hospice challenges with significant ethical dimensions across the three overarching domains: 1) care delivery systems; 2) addressing the many dimensions of suffering; and 3) difficult decisions near the end of life. The contributors are among the most experienced palliative care, hospice and ethics scholars in North America and Western Europe. Each has been given relatively free reign to address what they feel are the most pressing ethical challenges within their domain, so a wide range of positions and vantage points are represented. As a result, the volume provides a very diverse ethical exploration of this relatively young field that can deepen, stretch, and at times confront any simple notion of the challenges facing patients, their families, professional caregivers, and policy makers.
