Without a Prop David S. Yetman 2010-05 Hinckley, Hunt, Little Harbor and Lyman-Morse are names that conjure up visions of sleek luxury yachts, comfortably slicing through even the roughest ocean waters. In the quest to offer the latest technology, many of their designs now feature water-jets instead of traditional propellers. But the latest thing in propulsion isn't new at all. Today's water-jets are the result of more than two centuries of trial and error, exhilarating successes and frustrating defeats experienced by a cast of inventors, entrepreneurs and adventurers who weren't afraid to lay it all on the line. They include a self-taught craftsman backed by the Founding Fathers, the engineers of the Royal Navy, a small-town Ohio genius, a New Zealand sportsman and an American industrialist. Their efforts, which ranged from back-yard tinkering to daring international expeditions contributed to the spectacular technology that now powers everything from fishing boats to frigates. The water-jet is here to stay. David S. Yetman has been a prolific, award-winning boating writer for more than 15 years. He has written four books and more than 200 articles for a broad range of boating magazines including Boating World, Motor Boating, Offshore, Power & Motoryacht, Sail, Soundings, Trailer Boats and Yachting. As a young man, he was involved in several start-up ventures in design, manufacturing and retail sales before embarking on a career in mechanical design and engineering, rising to the level of Engineering Manager for a high-technology company before retiring in 2001. He has been awarded patents for designs of a wide range of products, including motorcycle frames, laboratory apparatus and automated instruments used in DNA research, and enjoys applying his broad technical experience to boating and writing. He and his wife, Pat, live on Hodgdon Island, Maine and cruise the New England coast on CURMUDGEON, their

Motorized Obsessions Paul R. Josephson 2007-08-22 From dirt bikes and jet skis to weed wackers and snowblowers, machines powered by small gas engines have become a permanent—and loud—fixture in American culture. But fifty years of high-speed fun and pristine lawns have not come without cost. In the first comprehensive history of the small-bore engine and the technology it powers, Paul R.

Josephson explores the political, environmental, and public health issues surrounding one of America's most dangerous pastimes. Each chapter tells the story of an ecosystem within the United States and the devices that wreak havoc on it—personal watercraft (PWCs) on inland lakes and rivers; all-terrain vehicles (ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners' clubs in encouraging responsible operation.

Synthesizing information from medical journals, recent environmental research, nongovernmental organizations, and manufacturers, Josephson's compelling history leads to one irrefutable conclusion: these machines cannot be operated without loss of life and loss of habitat.
