Diesel Engine Air Emissions Reduction Technologies 2010 This report summarizes the results of a three-year project lead by the NAVFAC Engineering Service Center (NAVFAC ESC) to demonstrate the potential of two diesel engine exhaust gas treatment devices in reducing diesel engine particulate matter (PM) emissions. These devices, which are installed in the engine's exhaust system, are designed to trap engine PM emissions and periodically, chemically oxidize the soot through a process

termed "regeneration." The project was sponsored by the Environmental Security Technology Certification Program (ESTCP) with additional funding provided by Cummins, Inc. One of the tested devices, the ESW, Inc. Particulate Reactor, uses only the heat of the engine for regeneration, while the other, the Cummins, Inc. Robust Particulate Filter, also included the capability for direct fuel injection into the filter to provide additional heat. The demonstration results were that the ESW product reduced PM emissions by 50%, as expected, while the Cummins filter had significant performance issues which resulted in the suspension of its development as a commercial product.

A Call to Leadership Linda Dye Ellis 2010 A Call to Leadership examines commonly accepted condemnations of public education and highlights the key role played by the Indiana Association of Public School Superintendents (IAPSS) in supporting its members' tireless struggle for educational improvement and in correcting public misconceptions. While the book describes specific circumstances in Indiana, efforts at the state level reflect educational challenges throughout the United States, and this volume will be a valuable reference source for educational policy makers throughout North America. Since the IAPSS's foundation, graduation rates have risen over twenty percent, and more rigorous coursework has been introduced to an increasingly diverse pool of students. The landscape of education has changed, as 1,100 Indiana school

districts have been consolidated into 293 corporations under the direction of licensed superintendents. Throughout the whole period, school leaders have struggled to implement increasingly complex programs that have often been mandated but left underfunded.

Nicotine Addiction C. Tracy Orleans 1993 Despite persistent warnings from the medical profession about the health risks involved in cigarette smoking, millions of people continue to smoke cigarettes. With contributions from renowned experts, this groundbreaking work defines and explains nicotine addiction as a primary problem or disease, instead of as a habit or risk factor for other diseases. A comprehensive, clinical text on tobacco dependence, this book provides clinicians with essential information on how to diagnose and treat nicotine addicted patients. It also offers the medical, epidemiological and behavioral science backgrounds necessary for understanding the process and dynamics of tobacco dependence. Following the traditional format of medical texts, the book first covers etiology, pathogenesis and complications, then diagnosis and treatment, and finally public health and prevention. Part One presents an overview of the biological, psychological and social factors that contribute to nicotine dependence including such topics as a description of nicotine delivery systems, psychopharmacology, economics, natural history and epidemiology, mortality, morbidity, and environmental tobacco smoke exposure. The second part offers practical guidelines and tools for treating nicotine dependence and describes a stepped-care treatment model with brief interventions that can be easily integrated into routine medical practice. This section also covers the role of psychopharmacologic and formal treatment programs, the treatment of smokeless tobacco addiction, and treating

nicotine dependence in pregnant women and in people with medical illnesses, other chemical dependencies, or psychiatric disorders. The last section focuses on worksite and community intervention programs and summarizes the research on smoking patterns and history in women, Blacks, Hispanics, youth, and older adults, and shows how intervention and prevention programs could be made more effective in these groups. Written by the nation's leading tobacco control researchers and clinicians, this important work contains new and critical information not previously available.

Union Pacific Maury Klein 2011-02-01 Praised by the Chicago Tribune as "thoroughly

and compellingly detailed history," Volumes I and II of Maury Klein's monumental history of the Union Pacific Railroad covered the years from 1863-1969. Now the third and final volume brings the story of the Union Pacific--the oldest, largest, and most successful railroad of modern times--fully up to date. The book follows the trajectory of an icon of the industrial age trying to negotiate its way in a post-railway world, plagued by setbacks such as labor disputes, aging infrastructure, government de-regulation, ill-fated mergers, and more. By 1969 the same company that a century earlier had triumphantly driven the golden spike into Promontory Summit--to immortalize the nation's first transcontinental railway--seemed a dinosaur destined for financial ruin. But as Klein shows, the Union Pacific not only survived but is once more thriving, which proves that railways remain critical to commerce and industry in America, even as passenger train travel has all but disappeared. Drawing on interviews with Union Pacific personnel past and present, Klein takes readers inside the great railroad--into its boardrooms and along its tracks--to show how the company adapted to the rapidly changing world of modern transportation. The book also offers fascinating portraits of the men who have run the railroad. The challenges they faced, and the strategies they developed to meet them, give readers a rare glimpse into the inner workings of one of America's great companies. A capstone on a remarkable achievement, *Union Pacific: The Reconfiguration* will appeal to historians, business scholars, and transportation

buffs alike.
