Licensing Standard Essential Patents Igor Nikolic 2021-11-18 What is the licensing framework of standard essential patents (SEPs) for connectivity standards such as 5G and Wi-Fi? How will the framework change with the Internet of Things (IoT)? This book provides comprehensive answers to these questions. For over two decades, connectivity standards have been the subject of litigation and controversy around the globe. Now, with the introduction of 5G and the emergence of the world of connected objects, or the IoT, the licensing framework for SEPs is becoming even more contentious. In order to bring clarity to the debate, this book analyses and explains key components of a fair, reasonable and non-discriminatory (FRAND) licence for SEPs; clarifies the economic, policy and market background of SEP disputes; examines the interrelated application of contract, patent and competition laws; and describes the approaches by courts and regulators in the EU, US and the UK. Importantly, the book also assesses how the experience from the smartphone and ICT industries can be applied in a new environment of the IoT, and considers what needs to be changed in the future SEP licensing landscape. The book provides a holistic coverage of SEP licensing issues in an attempt to reduce uncertainty within this highly complex and technical area, and will be useful to practitioners, policy makers, SMEs and large technology companies in the IoT, as well as academics interested in the field.

World Development Report 2021 World Bank 2021-06-15 Today's unprecedented growth of data and their ubiquity in our lives are signs that the data revolution is transforming the world. And yet much of the value of data remains untapped. Data collected for one purpose have the potential to generate economic and social value in applications far beyond those originally anticipated. But many barriers stand in the way, ranging from misaligned incentives and incompatible data systems to a fundamental lack of trust. World Development Report 2021: Data for Better Lives explores the tremendous potential of the changing data landscape to improve the lives of poor people, while also acknowledging its potential to open back doors that can harm individuals, businesses, and societies. To address this tension between the helpful and harmful potential of data, this Report calls for a new social contract that enables the use and reuse of data to create economic and social value, ensures equitable access to that value, and fosters trust that data will not be misused in harmful ways. This Report begins by assessing how better use and reuse of data can enhance the design of public policies, programs, and service delivery, as well as improve market efficiency and job creation through private sector growth. Because better data governance is key to realizing this value, the Report then looks at how infrastructure policy, data regulation, economic policies, and institutional capabilities enable the sharing of data for their economic and social benefits, while safeguarding against harmful outcomes. The Report concludes by pulling together the pieces and offering an aspirational vision of an integrated national data system that would deliver on the promise of producing high-quality data and making them accessible in a way that promotes their safe use and reuse. By examining these opportunities and challenges, the Report shows how data can benefit the lives of all people, particularly poor people in low- and middle-income countries. .
