The Gene Revolution Sakiko Fukuda-Parr 2012-04-27 Whether or not to embrace GM technologies is a fundamental and politically charged question facing humanity in the 21st century, particularly in light of rapidly growing populations and the unknown future impacts of climate change. The Gene Revolution is the first book to bridge the gap between the naysayers and cheerleaders and look at the issues and complexities facing developing and transitional countries over decisions about GM in light of the reality of what is happening on the ground. The first part of the volume looks at the rise of GM crops, commercialization and spread of the technology and the different positions of the USA and the European Union on the GM question and the effect of global markets. The second part consists of country perspectives from Argentina, Brazil, China, India and South Africa, which provide insight into the profound challenges these countries face and the hard choices that have to be made. The final part takes the analysis a step further by comparing developing and transitional country experiences, and charts a future course for government policy on GM that supports growth, sustainability and equity for the many billions of people affected worldwide.

Biological Extinction Partha Dasgupta 2019-09-05 Questions why species are becoming extinct, and how we can protect the natural world on which we all depend.

Reproductive Sciences in Animal Conservation Pierre Comizzoli 2019-08-30 This second edition emphasizes the environmental impact on reproduction, with updated chapters throughout as well as complete new chapters on species such as sharks and rays. This is a wide-ranging book that will be of relevance to anyone involved in species conservation, and provides critical perspectives on the real utility of current and emerging reproductive sciences. Understanding reproductive biology is centrally important to the way many of the world's conservation problems should be tackled. Currently the extinction problem is huge, with up to 30% of the world's fauna being expected to disappear in the next 50 years. Nevertheless, it has been estimated that the global population of animals in zoos encompasses 12,000 – 15,000 species, and we anticipate that every effort will be made to preserve these species for as long as possible, minimizing inbreeding effects and providing the best welfare standards available. Even if the reproductive biology community cannot solve the global biodiversity crisis for all wild species, we should do our best to maintain important captive populations. Reproductive biology in this context is much more than the development of techniques for helping with too little or too much breeding. While some of the relevant techniques are useful for individual species that society might target for a variety of reasons, whether nationalistic, cultural or practical, technical developments have to be backed up by thorough biological understanding of the background behind the problems.

Understanding by Design Grant P. Wiggins 2005-01-01 Presents a multifaceted model of understanding, which is based on the premise that people can demonstrate understanding in a variety of ways.

Earth Science Glencoe/McGraw-Hill 2001-01 Earth Science: Geology, the Environment, and the Universe is designed for complete concept development and supported with riveting narrative to clarify understanding. Modern Environmentalism David Pepper 2002-06 Modern Environmentalism presents a comprehensive introduction to environmentalism, the origins of its main beliefs and ideas, and how these relate to modern environmental ideologies. Providing a historical overview of the development of attitudes to nature and the environment in society, the book examines key environmentalist ideas, influences and movements. Science's role in mediating our view of nature is emphasised throughout. This entirely new account draws on the explosion of writing on socio-environment relations since Pepper's earlier work, The Roots of Modern Environmentalism.

The Freedom of the Seas Hugo Grotius 2018-08-03 The Freedom of the Seas (originally titled in Latin: Mare Liberum) is a book in Latin on international law written by the Dutch jurist and philosopher Hugo Grotius, first published in 1609. In The Free Sea, Grotius formulated the new principle that the sea was international territory and all nations were free to use it for seafaring trade. The disputation was directed towards the Portuguese Mare clausum policy and their claim of monopoly on the East Indian Trade. Grotius wrote the treatise while being a counsel to the Dutch East India Company over the seizing of the Santa Catarina Portuguese carrack issue. This edition contains both Latin and English versions, as translated by Ralph Van Deman Magoffin.
