Loose Leaf for Financial Accounting Robert Libby 2010-09-09 Libby/Libby/Short wrote this text based on their belief that the subject of financial accounting is inherently interesting, but financial accounting textbooks are often not. They believe most financial accounting textbooks fail to demonstrate that accounting is an exciting field of study and one that is important to future careers in business. When writing this text, they considered career relevance as their guide when selecting material, and the need to engage the student as their guide to style, pedagogy, and design. Libby/Libby/Short is the only financial accounting text to successfully implement a real-world, single focus company approach in every chapter. Students and instructors have responded very favorably to the use of focus companies and the real-world financial statements. The companies chosen are engaging and the decision-making focus shows the relevance of financial accounting regardless of whether or not the student has chosen to major in accounting.

Writing Analytically David Rosenwasser 2018-01-01 WRITING ANALYTICALLY treats writing as a tool of thought, offering prompts that lead students through the process of analysis and help them to generate original, well-developed ideas. The authors of this brief, popular rhetoric believe that learning to write well requires learning to use writing as a tool to think well. Rosenwasser and Stephen emphasize analysis as a mode of enriching understanding that precedes and in some cases supplants argument. Materials in the eighth edition are better integrated, more contextualized and--when possible--condensed. A new chapter, Thinking Like a Writer, contains a broad array of strategies for integrating opportunities for writing into a course. It makes explicit a subtext that pervades the book: that to think of yourself as a writer is to see more, to think differently and to engage the meaning of things more earnestly. Parentology Dalton Conley 2014-03-18 An award-winning scientist offers his unorthodox approach to childrearing: “Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions” (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you’re like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley’s sassy kids show him the limits of his profession. *Parentology* teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You’ll be laughing and learning at the same time.
