Nuclear Science Abstracts 1973 NSA is a comprehensive collection of international nuclear science and technology literature for the period 1948 through 1976, pre-dating the prestigious INIS database, which began in 1970. NSA existed as a printed product (Volumes 1-33) initially, created by DOE's predecessor, the U.S. Atomic Energy Commission (AEC). NSA includes citations to scientific and technical reports from the AEC, the U.S. Energy Research and Development Administration and its contractors, plus other agencies and international organizations, universities, and industrial and research organizations. References to books, conference proceedings, papers, patents, dissertations, engineering drawings, and journal articles from worldwide sources are also included. Abstracts and full text are provided if available.

Differential Diagnosis and Management for Chiropractors Thomas A. Souza 2014-10-01 The Fifth Edition of this best-selling reference is a compendium of evidence-based approaches to the most common presenting complaints. Covering both musculoskeletal and visceral complaints, this text is intended to direct the chiropractor toward an appropriate plan of approach in both diagnostic evaluation and care. Highlighting these approaches are flowcharts (algorithms), relevant historical questioning, and summaries of common conditions related to the presenting complaint. What's New in the 5th Edition? Additional disorders added to Selected Causes at the conclusion of chapters Addition of Likelihood Ratio graphics Addition of approximately 500 new references New Appendix: Evidence Based Approach to the Literature Expanded Appendix: Pharmacology for the Chiropractor includes newer drugs and further explains the classifications of medications mechanisms Translation into Practice Summary (TIPS) for most of the orthopedic chapters Updated Algorithm"

Endocrinology and Diabetes Francisco Bandeira 2022 Developed by a renowned group of international authors, this engaging, case-based title once again offers readers a wide range of thought-provoking case studies that reflect contemporary, challenging, hands-on clinical care. Expanded and fully updated, Endocrinology and Diabetes: A Problem Oriented Approach, 2nd Edition addresses the complete range of endocrinologic problems found in patient care, offering the reader a convenient and pointed way to solve clinical problems in a timely manner. Due to its comprehensive coverage and practical focus, this title has developed a special place in the field

of endocrinology and will again be of great interest to endocrinologists, diabetologists, internal medicine physicians, family physicians, fellows, and residents. The enthusiastic reception and warm welcome of the first edition of this book was overwhelming and gratifying. Despite many standard texts that cover physiology and clinical aspects of endocrinology, this book found a special place because it focused on patient care and practical aspects of endocrine practice. In the current volume we were fortunate to again have the honor of collaboration by international authors who pride themselves foremost as clinical endocrinologists. We hope our readers will find this updated, improved edition worthwhile, and use it for the benefit of their patients. .

Clinical Trials in Neurology Roberto J. Guiloff 2013-03-14 Clinical Trials in Neurology comprehensively tackles the methodology and design of clinical trials in neurological disease. A general section deals with the ethical aspects, drug development and regulatory requirements, basic trial designs and the statistics used. A diseases section tackles specific aspects of disorders, focusing on the relevant ethical issues, outcome variables and experience with large multicentre trials.

The new edition of Campbell-Walsh Urology is the must have reference for practitioners and residents!

Neuroscience in Africa Nilesh B. Patel 2019-06-28 This Research Topic covers some of the latest research on brain and behavior in health and disease in Africa. With its untapped resources and unique situations, "Neuroscience in Africa" has the potential to contribute to a better understanding of human brain function both in health and disease. The diverse African fauna display a range of specializations in brain structure/function relationships as a result of adaptations to the environment. Exploration of these may lead to insights into coping strategies which could be extrapolated to humans. Africa's unique flora is being investigated for anti-inflammatory, antinociceptive, antioxidant, antiepileptogenic and neuroprotective properties to determine its potential for use in the treatment of human brain disorders. There is also research on neurodegenerative and infectious diseases, not only common to the global world, but also neglected tropical diseases and conditions which provide unique avenues of investigations in basic and translational neuroscience on highly debilitating disorders - and on the effects of pathogens and environmental toxins.

Handbook of Normative Data for Neuropsychological Assessment Maura Mitrushina 2005-02-10 This reference book presents and critiques normative data for 26 commonly used neuropsychological tests. Locator tables throughout the book guide clinicians to the sets of normative data that are best suited to their needs, depending on the demographic characteristics of their patients. Chapters in the second edition have been updated and revised, and 15 new tests have been reviewed. The way the data are presented has been changed to make the book easier to use. Meta-analytic tables of predicted values for different ages (and education, where relevant) are included for nine tests that have a sufficient number of homogeneous datasets. No other reference offers such an effective framework for the critical evaluation of normative data for neuropsychological tests. Like the first edition, the new edition will be welcomed by practitioners, researchers, teachers, and graduate students as a unique and valuable contribution to the practice of neuropsychology.

How People Learn II National Academies of Sciences, Engineering, and Medicine 2018-10-27 There are many reasons to be curious about the way people learn, and the past several decades have seen an explosion of research that has important implications for individual learning, schooling, workforce training, and policy. In 2000, How People Learn: Brain, Mind, Experience, and School: Expanded Edition was published and its influence has been wide and deep. The report summarized insights on the nature of learning in school-aged children; described principles for the design of effective learning environments; and provided examples of how that could be implemented in the classroom. Since then, researchers have continued to investigate the nature of learning and have generated new findings related to the neurological processes involved in learning, individual and cultural variability related to learning, and educational technologies. In addition to expanding scientific understanding of the mechanisms of learning and how the brain adapts throughout the lifespan, there have been important discoveries about influences on learning, particularly sociocultural factors and the structure of learning environments. How People Learn II: Learners, Contexts, and Cultures provides a much-needed update incorporating insights gained from this research over the past decade. The book expands on the foundation laid out in the 2000 report and takes an in-depth look at the constellation of influences that affect individual learning. How People Learn II will become an indispensable resource to understand learning throughout the lifespan for educators of students and adults.
