Sheet Metal Shaping Ed Barr 2019-05-21 Whether you want to create custom or replacement parts or build an entire automobile body, this metalworking course for gearheads from best-selling automotive restoration author and professor Ed Barr will take you as far as your interests reach. Barr demystifies this seemingly black art with information on tools and basic skills and 14 customizable projects, fully illustrated with step-by-step color photography. First, you'll learn how to assemble your ideal toolkit, as well as how to build a power hammer and an English wheel. In the process, Barr will help you make informed choices based on available space and budget. Once you're all set

up, he addresses the concepts of shape and form. The projects are presented in a way that you can easily apply them to their own vehicles, whatever they may be. Barr also takes the time to show how the projects can be accomplished with different available tools. As you go, you'll gain the skills and confidence for tackling the increasingly complex cases presented. Work your way up to building a fender utilizing the wheeling machine you built earlier; then move on to building a Model T speedster body and an Indy car, and later a challenging '34 Plymouth fender. The book even includes common "goofs" and how to avoid and, if necessary, correct them. Written in an engaging and approachable style, Sheet Metal Shaping serves equally well as a useful supplement to Barr's previous Professional Sheet Metal Fabrication or as a must-have standalone volume for any fabricator's library.

A Cultural History of the Disneyland Theme Parks Sabrina Mittermeier 2020-  
11-10 When the first Disneyland opened its doors in 1955, it reinvented the  
American amusement park and transformed the travel, tourism and  
entertainment industries forever. Now a global vacation empire, the original  
park in Anaheim, California, has been joined by massive complexes in Florida,  
Tokyo, Paris, Hong Kong and Shanghai. Spanning six decades, three  
continents and five distinct cultures, Sabrina Mittermeier presents an  
interdisciplinary examination of the parks, situating them in their proper  
historical context and exploring the distinct cultural, social and economic  
landscapes that defined each one at the time of its construction. She then  
spotlights the central role of class in the subsequent success or failure of each  
venture. The first comparative study of the Disney theme parks, this book  
closes a significant gap in existing research and is an important new  
contribution to the field, providing the first discussion of the Disney parks and  
what they reveal about the cultures they are set in. There has been a lack of  
focus on cross- and trans-cultural analyses of theme parks generally and  
Disney theme parks specifically, until now. It is also particularly interesting –  
and will be welcomed for it – for the non-United States context of the study.  
This is a thorough examination of all of the existing Disney Parks and how they  
function within their respective cultures. While Disney themes and characters  
attempt to be universal, the author does a good job of arguing for where this is  
not possible and how glocalization is crucial to the parks' successes. The  
writing is academic, but it is not inaccessible. It will have wide disciplinary  
appeal within academia, as tourism studies cross into a variety of fields  
including history, American studies, fandom studies, performance studies and

cultural studies. It will be invaluable to those working in the field of theme park scholarship and the study of Disney theme parks, theme parks in general and related areas like world's expositions and spaces of the consumer and lifestyle worlds. It will also be of interest to Disney fans, those who have visited any of the parks or are interested to know more about the parks and their cultural situation and context.
