You Gotta Be Kidding! Workman Publishing 2020-07-14 Gross, embarrassing, and just plain silly questions about boogers, bugs, smelly socks, itchy scabs, and more! Adapted from the hugely popular board game, this interactive and completely engaging book serves up hundreds of bizarre, embarrassing, sometimes ethical and sometimes stomach-churning dilemmas that kids will love to pose to their friends and siblings, whether in the backseat, on a sleepover, at a party, on a rainy day, or during a lull in the lunchroom (if you dare). Ponder the icky: Would you rather eat 10 pounds of cheese -OR- a bucket of peanut butter—with nothing to drink? The exponentially icky: Would you rather drink liquid found leaking from a garbage can -OR- chew on a hairy clump found between the cushions of an old couch? The fantastic: Would you rather be able to talk with all animals -OR- be able to understand all languages? The priority-testing: As a soccer player, would you rather mess up and score a goal for the other team but still have your team win -OR- play your best game ever even though your team loses? And the hair-raising: Would you rather swim across a river that is filled with crocodiles -OR- spend the night on an island where man-eating tigers live? Fascinating sidebars throughout are filled with interesting ancillary information—the nature of drool, left-handedness vs. right-handedness, what's dangerously filthy and what's just gross, why we blush when we're embarrassed—so kids can learn something as they laugh!

**Accelerating MATLAB with GPU Computing** Jung W. Suh 2013-11-26 Beyond simulation and algorithm development, many developers increasingly use MATLAB even for product deployment in computationally heavy fields. This often demands that MATLAB codes run faster by leveraging the distributed parallelism of Graphics Processing Units (GPUs). While MATLAB successfully provides high-level functions as a simulation tool for rapid prototyping, the underlying details and knowledge needed for utilizing GPUs make MATLAB users hesitate to step into it. **Accelerating MATLAB with GPUs** offers a primer on bridging this gap. Starting with the basics, setting up MATLAB for CUDA (in Windows, Linux and Mac OS X) and profiling, it then guides users through advanced topics such as CUDA libraries. The authors share their experience developing algorithms using MATLAB, C++ and GPUs for huge datasets, modifying MATLAB codes to better utilize the computational power of GPUs, and integrating them into commercial software products. Throughout the book, they demonstrate many example codes that can be used as templates of C-MEX and CUDA codes for readers' projects. Download example codes from the publisher's website: <http://booksite.elsevier.com/9780124080805/> Shows how to accelerate MATLAB codes through the GPU for parallel processing, with minimal hardware knowledge Explains the related background on hardware, architecture and programming for ease of use Provides simple worked examples of MATLAB and CUDA C codes as well as templates that can be reused in real-world projects

A Short Guide to Risk Appetite David Hillson 2017-03-02 How much risk should we take? *A Short Guide to Risk Appetite* sets out to help all those who need to decide how much risk can be taken in a particular risky and important situation. David Hillson and Ruth Murray-Webster introduce the RARA Model to explain the complementary and central roles of Risk Appetite and Risk Attitude, and along the way they show how other risk-related concepts fit in. Risk thresholds are the external expression of inherent risk appetite, and the challenge is how to set the right thresholds. By progressively deconstructing the RARA Model, the authors show that the essential control step is our ability to choose an appropriate risk attitude. The book contains practical guidance to setting risk thresholds that take proper account of the influences of organisational risk culture and the individual risk preferences of key stakeholders. Alongside this, individuals and organisations need to choose the risk attitude that will optimise their chances of achieving the desired objectives.

An Aid to Radiology for the MRCP K. K. Ray 2000-04-17 Co-written by the author of the best-seller *An Aid to the MRCP Short Cases* this new, systematically organized text concentrates on examples that are frequently examined in the MRCP Part 2 written examination - saving candidates time

during revision and enabling them to concentrate on weaker specialities. By including high quality images and labelling abnormal findings on the original images, the authors enable the reader to feel confident about recognizing specific radiological abnormalities, instead of guessing where the abnormality lies. In order to avoid guessing, the reader is asked to describe the radiological findings in each case. In the Question section, each page is dedicated to an X-ray and sample questions. An Answer section, with further radiographs to highlight variations and details, is given at the end of the book to provide background knowledge.

Death Waits in the Dark Mark Edward Langley 2020-08-04 It took all of thirty seconds for two shots to bring the world of Margaret Tabaaha crashing down around her. After losing her husband in Afghanistan during the first year of Operation Enduring Freedom, her two sons were all she had left. Now they had been taken from her violently, deliberately, plunging her into a whiskey bottle and stripping away her reason for living. When Arthur Nakai receives a call from his first love, Margaret, her voice pleading for his help, it comes as he is attending a wake for one of the men he considered a brother from his days in the Marines 6th LAR Wolf Pack Battalion. Feeling a deep and responsible obligation to help her, Arthur soon finds himself involved in the multi-billion-dollar world of the oil and gas industry and coming face-to-face with an old adversary, Elias Dayton. Their paths had crossed when Arthur was a member of the Shadow Wolves, an elite tactical unit within US Customs and Border Protection. Now Dayton runs Patriot Security, a Blackwater-type firm that keeps the oil rigs, gas wells, and man camps secure from the Water Protectors, protesters pushing to stop the fracking and poisoning of Native lands. As Arthur works through the case from his end, Navajo police chief Jake Bilagody tackles it from another angle, looking into the strained relationship between the oil company and the Navajo people, all while searching for a missing Navajo man that may have become an unwilling piece on the reservation checkerboard. But when Arthur learns the identity of the boys' killer, he struggles to make sense of it. Because if the clues are right, he will be forced to make a decision that will haunt him for the rest of his life.

Lusciously romantic and full of action-packed drama, readers will be swept away by this thrilling novel. Dawn Montgomery knows that monsters really do come out at night—after all, they are her job. It's just after the thirty-year war between vampires and humans, and as an ambassador between the two sides (a role she inherited when her parents were killed), Dawn quickly learns that balancing schoolwork, teen life, and the requests of Lord Valentine, the most frightening vampire in the region, isn't easy. There's nowhere left to hide. I thought vampires were our enemies—they controlled our lives, isolated our cities, and demanded our blood—until I met Victor. With Victor taking over as the new Lord Valentine, things were supposed to get better. Instead, they're worse than ever. Day Walkers, a new breed of vampires who can walk in the sun, are terrorizing the city. Blood supplies are low, and if Victor's vampires don't get enough, they will become infected with the Thirst—a disease that will turn them into mindless killers. To stop it, I must journey across the desolate wasteland to the very place where the sickness began. I can only hope that the answers that await me are enough to save us all...before it's too late.

A Guide to Starting Your Hedge Fund Erik Serrano Berntsen 2015-03-03 Successful hedge fund investing begins with well-informed strategy. A Guide to Starting Your Hedge Fund is a practical, definitive "how-to" guide, designed to help managers design and launch their own funds, and to help investors select and diligence new funds. The first book to examine the practical aspects of setting up and operating funds with a focus on energy commodity markets, this book scrutinises the due diligence process and comprehensively reviews the opportunities and risks of all energy commodity markets as hedge fund investments. Extensive planning and strategy advice prove invaluable to prospective fund managers and investors alike, and detailed discussion of the markets' constraints help inform procedural decisions. Readers gain insight into practical matters including legal and commercial structures, due diligence, fund raising, operations, and more, allowing them to construct a concrete investment plan before ever touching a penny. Asset managers are looking to energy commodities to provide attractive uncorrelated – if volatile – returns. These high returns, however, are accompanied by high risk. Few investors have experience evaluating these investment opportunities, and few prospective fund managers understand the market fundamentals and their associated risks. This book provides the answers sorely lacking in hedge fund literature, giving investors and fund managers the background they need to make smarter decisions. Understand the markets' structures, opportunities, and risks. Develop a comprehensive, well-informed investment strategy. Conduct thorough due diligence with a detailed plan. Examine the practical aspects of fund raising, legal and tax structure, and more. Oil has long been traded by hedge funds, but electricity, the fuels that generate electricity, and the environmental products like emissions allowances and weather derivatives have become the new "hot" investment strategies. These high returns come with higher risk, but A Guide to Starting Your Hedge Fund ensures participants have essential information at their disposal.

Colonial Lives Richard E. Boyer 2000 Colonial Lives offers a rich variety of archival documents in translation which bring to life the political and economic workings of Latin American colonies during 300 years of Spanish rule, as well as the day-to-day lives of the colonies' inhabitants. Intended to complement textbooks such as Burkholder and Johnson's Colonial Latin America by presenting students with primary sources -- the raw materials on which the facts in other textbooks are based -- this reader strives to illustrate the impact of issues such as race, class, gender, sexuality, culture and religion in the daily lives of both natives and colonists alike. The concerns, struggles and perspectives of the inhabitants of colonial Latin America are reflected in transcripts of civil and criminal court cases, administrative reviews, ecclesiastical investigations, Inquisition trials, wills, and letters the editors have included in this reader. Each document is prefaced by an introduction that places it in the social and political context of the period. The book also includes a glossary of terms and lists of suggested further readings. Most uniquely, the book offers helpful thematic cross-referencing sections and an index of themes which allow instructors to easily adapt the book to their courses and to assign readings according to the criteria of their own specific curriculums.
