High Tide Jude Deveraux 2012-12-11 Fiona is the creator of fashion doll sensation Kimberley, and is quite satisfied with her career-focused life. Yet when her boss informs her that she must win over a new account by going camping with the creator of a hit children's TV show, she is extremely reluctant. Nevertheless, she goes to Florida to meet Roy and his Guide Ace Montgomery. When Roy is found dead with Fiona holding the bloody knife, she becomes the prime suspect - though she has no recollection of what happened. Things get worse when she learns that Roy, until now a stranger to her, left her all the proceeds from his new TV show, giving her a strong motive for murder. Suddenly, she and Ace find themselves on the run, and being condemned by the press for murder. They must prove their innocence by discovering the true motive and murderer of Roy. Fiona and Ace figure out they are linked through her father, and it is then that Fiona learns the secrets of her family's past, turning her world upside down.

Physical Sciences for NGSS Dr Tracey Greenwood 2020-05 Physical Sciences for NGSS has been specifically written to meet the requirements of the Next Generation Science Standards (NGSS) for High School Physical Sciences (HS-PS). It encompasses all three dimensions of the standards (science and engineering practices, crosscutting concepts, and disciplinary core ideas), addressing the program content through a wide range of engaging student-focused activities and investigations. Through completion of these activities, students build a sound understanding of science and engineering practices, recognize and understand the concepts that link all domains of science, and build the knowledge base required to integrate the three dimensions of the standards to meet the program's performance expectations.

You Gotta Be Kidding! Workman Publishing 2020-07-14 Gross, embarrassing, and just plain silly questions about boogers, bugs, smelly socks, itchy scabs, and more! Adapted from the hugely popular board game, this interactive and completely engaging book serves up hundreds of bizarre, embarrassing, sometimes ethical and sometimes stomach-churning dilemmas that kids will love to pose to their friends and siblings, whether in the backseat, on a sleepover, at a party, on a rainy day, or during a lull in the lunchroom (if you dare). Ponder the icky: Would you rather eat 10 pounds of cheese -OR- a bucket of peanut butter—with nothing to drink? The exponentially icky: Would you rather drink liquid found leaking from a garbage can -OR- chew on a hairy clump found between the cushions of an old couch? The fantastic: Would you rather be able to talk with all animals -OR- be able to understand all languages? The priority-testing: As a soccer player, would you rather mess up and score a goal for the other team but still have your team win -OR- play your best game ever even though your team loses? And the hair-raising: Would you rather swim across a river that is filled with crocodiles -OR- spend the night on an island where man-eating tigers live? Fascinating sidebars throughout are filled with interesting ancillary information—the nature of drool, left-handedness vs. right-handedness, what's dangerously filthy and what's just gross, why we blush when we're embarrassed—so kids can learn something as

they laugh!

Seaforth World Naval Review Conrad Waters 2021-12-30 For more than a decade, this annual volume has provided an authoritative summary of all that has happened to the world's navies and their ships in the previous twelve months. It combines regional surveys with major articles on important new warships, and looks at wider issues of significance to navies such as aviation and weaponry. The contributors come from around the globe and as well as providing a balanced picture of naval developments, they interpret their significance and explain their context. As well as its regular regional reviews, the 2022 volume focuses on three fleets: the Sri Lankan Navy, the Spanish Navy, and the Royal Navy. There are in-depth articles on the Argentinian Bouchard Class OPVs, the Russian Project 20380 Stereguschchiy Class corvettes, and the Royal Navy's Batch 2 'River' Class OPVs. The technological section looks at optronic systems and offboard mine countermeasures, and there is the regular review of what is happening in naval aviation, which includes coverage of the US Marine/Navy MV-22 tiltrotor. Now firmly established as the only annual naval overview of its type in the world, The Seaforth World Naval Review is essential reading for the professional and enthusiast alike. It takes the reader to the heart of contemporary maritime affairs. "this is a marvelous asset for those wishing to keep up to date with naval matters. Very highly recommended." - Warship World

Colonial Lives Richard E. Boyer 2000 Colonial Lives offers a rich variety of archival documents in translation which bring to life the political and economic workings of Latin American colonies during 300 years of Spanish rule, as well as the day-to-day lives of the colonies' inhabitants. Intended to complement textbooks such as Burkholder and Johnson's Colonial Latin America by presenting students with primary sources -- the raw materials on which the facts in other textbooks are based -- this reader strives to illustrate the impact of issues such as race, class, gender, sexuality, culture and religion in the daily lives of both natives and colonists alike. The concerns, struggles and perspectives of the inhabitants of colonial Latin America are reflected in transcripts of civil and criminal court cases, administrative reviews, ecclesiastical investigations, Inquisition trials, wills, and letters the editors have included in this reader. Each document is prefaced by an introduction that places it in the social and political context of the period. The book also includes a glossary of terms and lists of suggested further readings. Most uniquely, the book offers helpful thematic cross-referencing sections and an index of themes which allow instructors to easily adapt the book to their courses and to assign readings according to the criteria of their own specific curriculums.

Blood-Kissed Sky J. A. London 2012-12-26 The second book in a romantic and drama-packed trilogy perfect for fans of Rachel Vincent, Julie Kagawa, and Alyson Noel. Lusciously romantic and full of action-packed drama, readers will be swept away by this thrilling novel. Dawn Montgomery knows that monsters really do come out at night—after all, they are her job. It's just after the thirty-year war between vampires and humans, and as an ambassador between the two sides (a role she inherited when her parents were killed), Dawn quickly learns that balancing schoolwork, teen life, and the requests of Lord Valentine, the most frightening vampire in the region, isn't easy. There's nowhere left to hide. I thought vampires were our enemies—they controlled our lives, isolated our cities, and demanded our blood—until I met Victor. With Victor taking over as the new Lord Valentine, things were supposed to get better. Instead, they're worse than ever. Day Walkers, a new breed of vampires who can walk in the sun, are terrorizing the city. Blood supplies are low, and if Victor's vampires don't get enough, they will become infected with the Thirst—a disease that will turn them into mindless killers. To stop it, I must journey across the desolate wasteland to the very place where the sickness began. I can only hope that the answers that await me are enough to save us all...before it's too late.

Plastic Scintillators Matthieu Hamel 2022-07-11 This book introduces the physics and chemistry of plastic scintillators (fluorescent polymers) that are able to emit light when exposed to ionizing radiation, discussing their chemical modification in the early 1950s and 1960s, as well as the renewed upsurge in interest in the 21st century. The book presents contributions from various researchers on broad aspects of plastic scintillators, from physics, chemistry, materials science and applications, covering topics such as the chemical nature of the polymer and/or the fluorophores, modification of the photophysical properties (decay time, emission wavelength) and loading of additives to make the material more sensitive to, e.g., fast neutrons, thermal neutrons or gamma rays. It also describes the benefits of recent technological advances for plastic scintillators, such as nanomaterials and quantum dots, which allow features that were previously not achievable with regular organic molecules or organometallics.
