Looking into the Seeds of Time Y. S. Brenner 2021-12-17

This stunning, refreshing work combines the history of economics and the practice of modern development. It is predicated on Brenner's view that there is no individual

freedom without economic security, and that such security depends upon progress in both the natural and social sciences. Social institutions determine the pace and direction of technological advancement and scientific and technological achievements determine which forms of social reorganization are possible and which are illusory. As all living is action, and living implies choices, any theory of development must start with the person. Economic laws obtain only in relation to specific forms of social existence. Advanced societies are technically capable of providing for basic needs but are not yet convinced of their ability to do so. Modern life still reflects the fears of a society still trying to escape the anxieties, demons, and ghosts of a long dark era of unemployment and starvation. The problem of development is the contradiction between technological potentials and cultural inheritances. Looking into the Seeds of Time was originally written with the belief that the growing mastery of nature by humanity would curb egoistic impulses and replace competitive with cooperative goals. While the same spirit pervades this new edition, the work reveals how political as well as economic processes make the goals of prosperity harder to achieve. The work reveals a rare insight into the mechanisms of the marketplace, and how they can be examined in a comparative, historical context-across nations as different as the United States, Great Britain and Japan, and from the Reformation to the modern era of bourgeois consolidation. This is institutional economics at its very best.

Rationalizing Culture Georgina Born 1995-09-08

Anthropologist Georgina Born presents one of the first ethnographies of a powerful western cultural organization, the renowned Institut de Recherche et de Coordination Acoustique/Musique (IRCAM) in Paris. As a year-long participant-observer, Born studied the social and cultural economy of an institution for research and production of avant-garde and computer music. She gives a unique portrait of IRCAM's composers, computer scientists, technicians, and secretaries, interrogating the effects of the cultural philosophy of the controversial avant-garde composer, Pierre Boulez, who directed the institute until 1992. Born depicts a major artistic institution trying to maintain its status and legitimacy in an era increasingly dominated by market forces, and in a volatile political and cultural climate. She illuminates the erosion of the legitimacy of art and science in the face of growing commercial and political pressures. By tracing how IRCAM has tried to accommodate these pressures while preserving its autonomy, Born reveals the contradictory effects of institutionalizing an avant-garde. Contrary to those who see postmodernism representing an accord between high and popular culture, Born stresses the continuities between modernism and postmodernism and how postmodernism itself embodies an implicit antagonism toward popular culture.

Scholarly Research for Musicians Sang-Hie Lee 2017-01-20

Scholarly Research for Musicians presents a range of research methods and techniques, incorporating both the common elements of traditional music research methodologies with innovative research strategies endemic to the fields of social science, education, and performance science. The author's collaborative and interdisciplinary approach reinforces the belief that research is most palpable and successful when accessed through a relevant and meaningful way of organizing thoughts and knowledge. Drawing from over twenty years of classroom experience, the author organizes the text into five units: Common Bases, Qualitative Research, Quantitative Research, Performance Science, and Review. Research is presented as an accessible process, one facilitated by brainstorming and question-asking, the systematic collection of information, and the analysis and synthesis of information—all with the aim to develop a succinct conceptual framework. In explicating this process, the author introduces traditional Western thought alongside contemporary and Eastern philosophy. Experts in the field of performance science explore novel approaches to studying the audience, incorporating various measuring devices and methods. In the final chapter, the author offers strategies for disseminating and publishing research reports. Scholarly Research for Musicians demystifies the research process for musicians and music students alike, demonstrating the common principles of cohesive research plans. PowerPoint presentations are available to instructors, covering chapter discussion points in summary format. This text explores interdisciplinary methods that merge with and focus on the study of music while emphasizing concepts and

materials relevant to all types of research.

The G Factor Arthur Robert Jensen 1998 The g factor--general mental ability--is the major construct for understanding both individual differences and the average differences between groups (race and sex) in educational and occupational attainment. It is also germane to social issues of national importance. Jensen fully and clearly explains the psychometric, statistical, genetic, and physiological basis of g, as well as the major theoretical challenges to the concept. For decades a key construct in differential psychology, the g factor's significance for the brain sciences as well as for education, sociology, anthropology, evolutionary psychology, economics, and public policy is clearly evident in this, the most comprehensive treatment of g available.

Make Room for TV Lynn Spigel 2013-11-26 Between 1948 and 1955, nearly two-thirds of all American families bought a television set—and a revolution in social life and popular

culture was launched. In this fascinating book, Lynn Spigel chronicles the enormous impact of television in the formative years of the new medium: how, over the course of a single decade, television became an intimate part of everyday life. What did Americans expect from it? What effects did the new daily ritual of watching television have on children? Was television welcomed as an unprecedented "window on the world," or as a "one-eyed monster" that would disrupt households and corrupt children? Drawing on an ambitious array of unconventional sources, from sitcom scripts to articles and advertisements in women's magazines, Spigel offers the fullest available account of the popular response to television in the postwar years. She chronicles the role of television as a focus for evolving debates on issues ranging from the ideal of the perfect family and changes in women's role within the household to new uses of domestic space. The arrival of television did more than turn the living room into a private theater: it offered a national stage on which to play out and resolve conflicts about the way Americans should live. Spigel chronicles this lively and contentious debate as it took place in the popular media. Of particular interest is her treatment of the way in which the phenomenon of television itself was constantly deliberated—from how programs should be watched to where the set was placed to whether Mom, Dad, or kids should control the dial. *Make Room for TV* combines a powerful analysis of the growth of electronic culture with a nuanced social history of family life in postwar America, offering a provocative glimpse of the way television became the mirror of so many of America's hopes and fears and dreams.
